

BLINKOTV: FEATURES IN DEVELOPMENT

EPG (electronic program guide)

- similar to other products on the digital tv market
- lists channels and program data on-screen based on admin provided information(via web interface)

VOD recording

- automatic, triggered on server based on time stamps (start time, end time) set by admin (via web interface)
- recording quality: same as broadcast, provided there is guaranteed upload bandwidth at broad caster to match the video bitrate

Live playback

- web based, application based (cross-platform)
- channel selector
- volume/mute
- fullscreen
- EPG
- customizable skin

VOD playback

- web based, application based (cross-platform)
- show selector based on multiple criteria
- volume/mute
- seek bar
- play/stop/pause
- fullscreen
- customizable skin

Instant recording (TiVo like)

- not available
- involves extra overhead on both client and server
- in some end-user configurations (that unlike a known black-boxed DVR cannot be predicted) might raise performance issues (both playback and recording might be poor)
- raises copyright, copy protection, discussions that have not yet been clarified, etc.
- future implementation of this feature is possible but not scheduled

Interactivity

- various add-ons and scenarios regarding this topic are under discussion and will be published at a later date

Other features

- various widgets and additions are planned for future releases. examples:
 - +live audience monitor
 - +demographic statistics and reports
 - +custom ad insertion
